Data Quality Goal

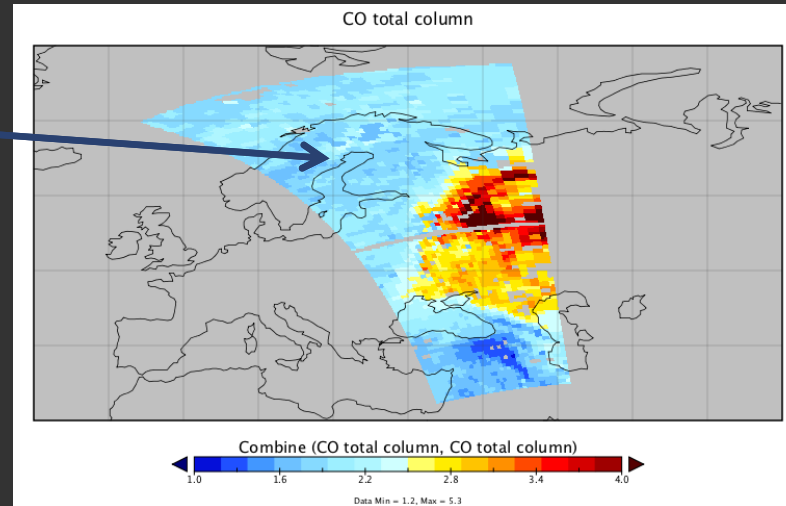

- ❧ Describe data quality so that users understand:
 - ❧ What it means for the data
 - ❧ How to use quality information for data selection and analysis
- ❧ Why so difficult?
 - ❧ Data Quality depends on intended use
 - ❧ Data Quality = Fitness for Purpose

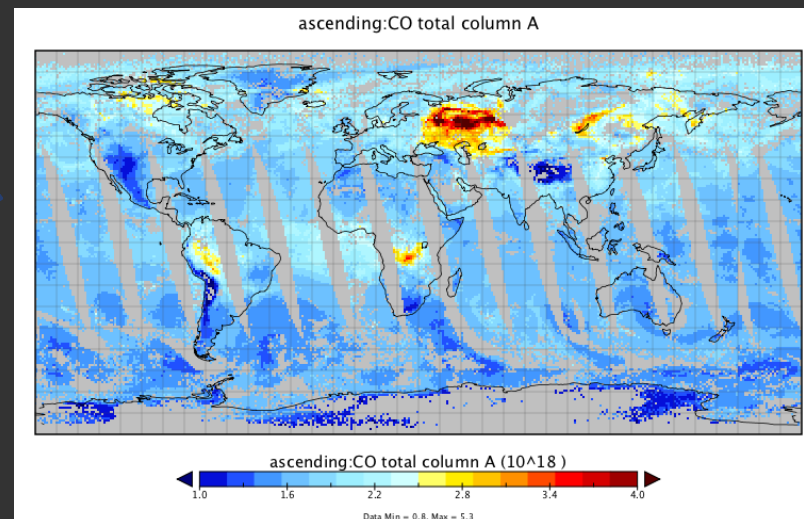

Satellite data swaths and grids

Temporal
and Spatial
Aggregation

Level 2
Swath

Level 3
Grid

A Survey of Data Quality at Different Levels of Aggregation

Increasing Aggregation →

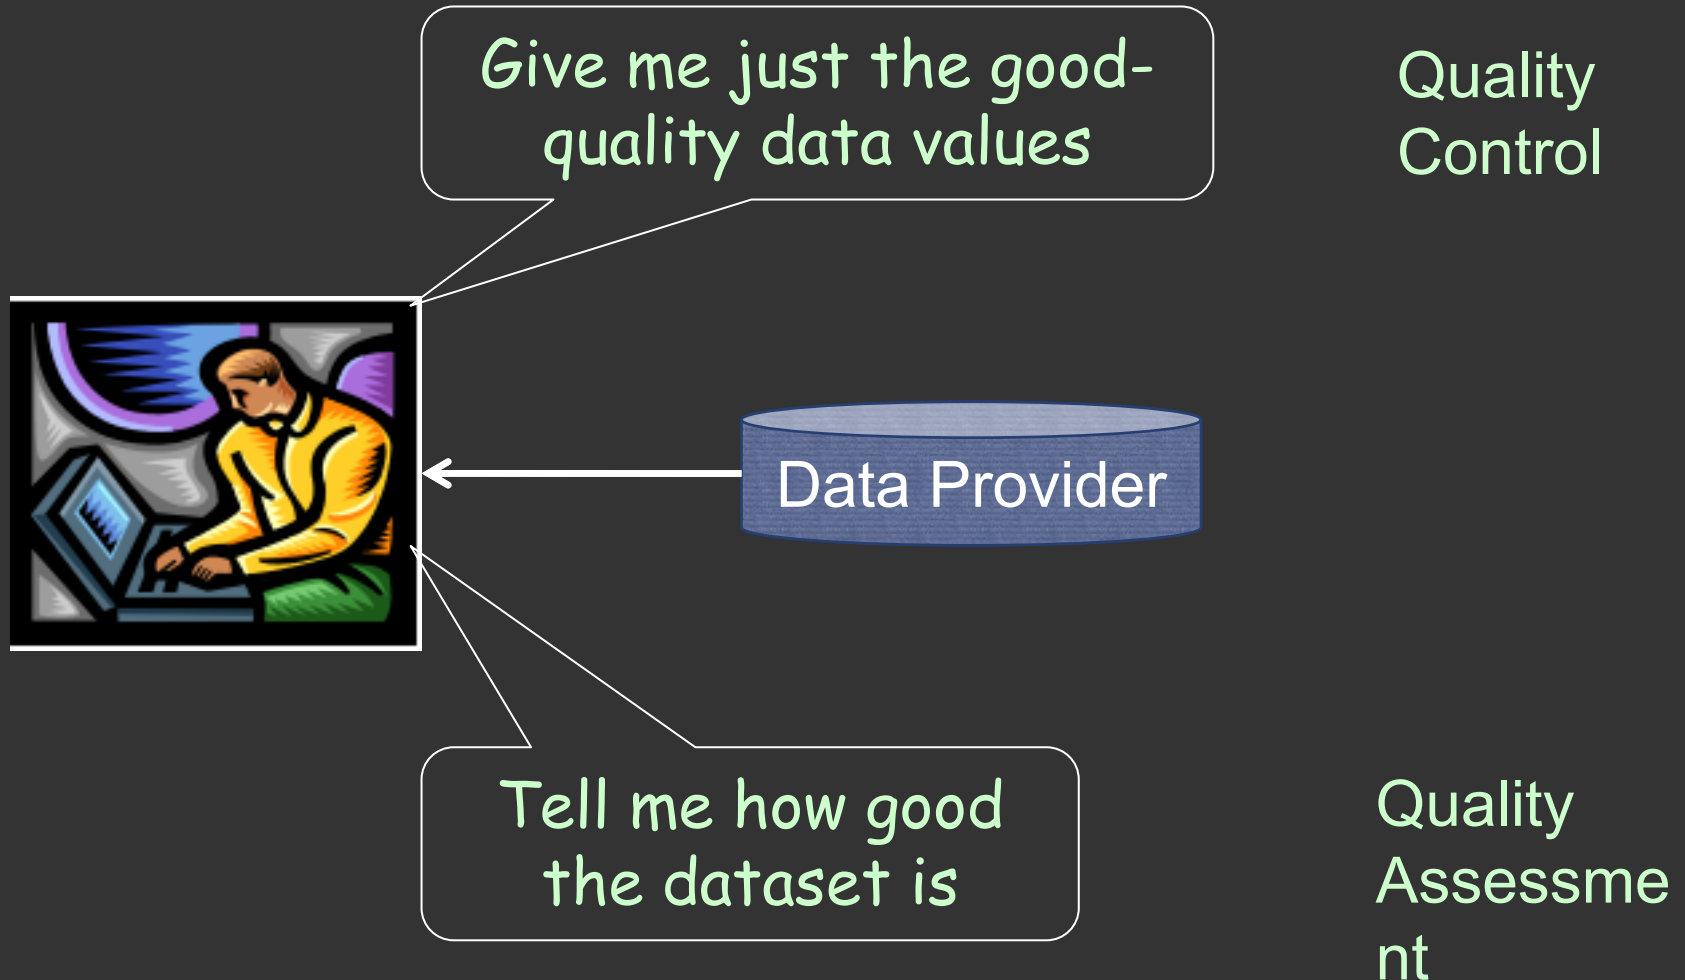

Increasing Aggregation ↓

Type of Data	Data-Value Quality	Data-File Quality	Dataset* Quality
Level 2 Swath	Quality Control (QC) flags	Statistical summary of QC info	Statistical accuracy relative to validation sites
Level 3 Grid	<ul style="list-style-type: none">•Cell std. dev.•Number of input values	Statistical summary of QC info	??

*Dataset = the assemblage of all the data values of the same type

Contrasting dataset-level vs. data-value-level Use Cases

Data-Value Quality Control

The Data Quality Screening Service: a straightforward example of data-value quality control

Original data array

AIRS* Total column precipitable water

Mask based on quality flags

Good quality data pixels retained

Output file has the same format and structure as the input file, with fill values replacing the low-quality data

* Atmospheric Infrared Sounder

Or, maybe not so straightforward...

AIRS* Quality Indicators

0 Best _____ ? _____
1 Good _____ ? _____
2 Do Not Use _____

MODIS Atmosphere** Confidence Flags

3 Very Good
2 Good
1 Marginal
0 Bad

* Atmospheric Infrared Sounder

** Moderate Resolution Imaging Spectroradiometer

Match up by recommendation?

AIRS Quality Indicators

0	Best	<i>Data Assimilation</i>
1	Good	<i>Climatic Studies</i>
2	Do Not Use	

MODIS Aerosols Confidence Flags

Ocean

3	Very Good
2	Good
1	Marginal
0	Bad

Land

3	Very Good
2	Good
1	Marginal
0	Bad

*Use these flags in order to
stay within expected error*

Ocean bounds Land

$\pm 0.03 \pm 0.10 \tau$

$\pm 0.05 \pm 0.15 \tau$

How do quality control indicators relate to dataset quality assessment?

AIRS Relative Humidity Comparison against Dropsonde
with and without Applying PBest Quality Flag Filtering
Boxed data points indicate AIRS RH data with dry bias > 20%

*From a study by Sun Wong (JPL) on specific humidity in the
Atlantic Main Development Region for Tropical Storms*

Quality Measures of Aggregated Data

File-Level Quality Statistics may or may not be useful for data selection

Percent Cloud Cover?

Study Area

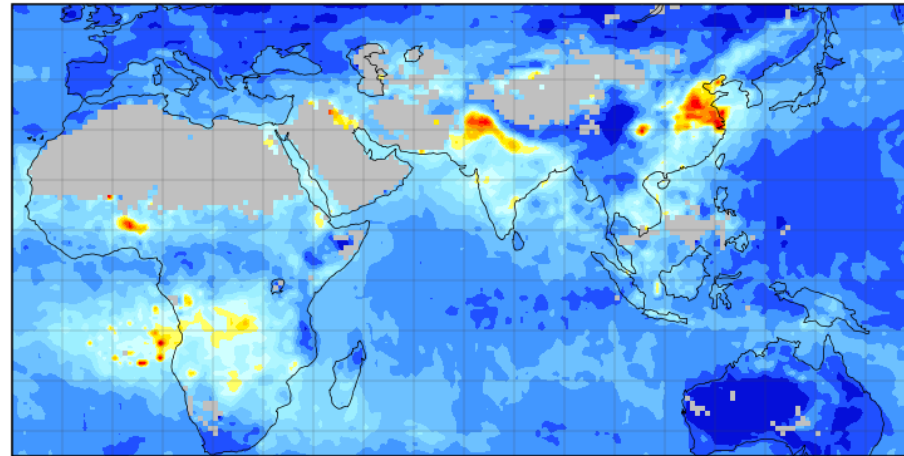

Level 3 grid cell standard deviation is difficult to interpret due to its dependence on magnitude

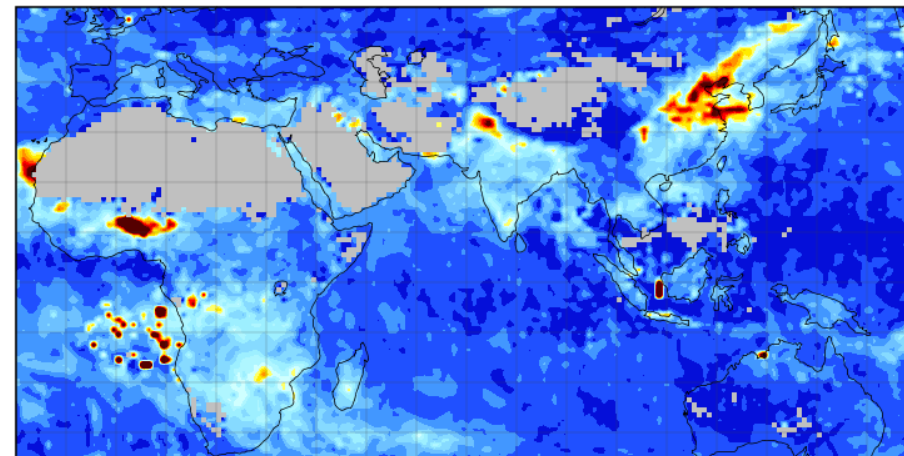

MODIS Aerosol Optical Thickness at 550 nm

Aerosol Optical Thickness at 0.55 microns for both Ocean (best) and Land (corrected): Mean of Daily

Mean

Aerosol Optical Thickness at 0.55 microns for both Ocean (best) and Land (corrected): Mean of Daily Mean (

Standard Deviation

Aerosol Optical Thickness at 0.55 microns for both Ocean (best) and Land (corrected): Standard Deviation of Daily

Potential Solution to Data Quality Ambiguity

Solution Part 1: Harmonize Quality Terms

- ❧ ISO 19115 Data Quality model
- ❧ Committee on Earth Observation Satellites (CEOS)
 - ❧ Quality Assurance for Earth Observations (QA4EO)
 - ❧ Working Group on Cal/Val (WGCV)
- ❧ Federation of Earth Science Information Partners
 - ❧ ESIP Information Quality Cluster
- ❧ Quality Ontology
 - ❧ Data Quality Screening Service: Data-value QC
 - ❧ Aerostat: Level 2 Bias
 - ❧ Multi-sensor Data Synergy Advisor: Bias accuracy

Solution Part 2: Address more dimensions of Quality

- ❧ Accuracy: bias + dispersion
 - ❧ Accuracy of data with low-quality flags
 - ❧ Accuracy of grid cell aggregations
- ❧ Consistency: spatial, temporal, observing conditions
- ❧ Completeness
 - ❧ Temporal: Time range, diurnal coverage, revisit frequency
 - ❧ Spatial: Coverage and Grid Cell Representativeness
 - ❧ Observing conditions
 - ❧ **N.B.: Incompleteness affects accuracy via sampling bias**

Solution Part 3: Address Fitness for Purpose Directly

- ⌘ Standardize terms of recommendation
- ⌘ Enumerate more positive realms and examples
- ⌘ Enumerate negative examples

Facets of Quality

Backup Slides

Neither pixel count nor standard deviation *fully* express how representative the grid cell value is

MODIS Aerosol Optical Thickness at 0.55 microns

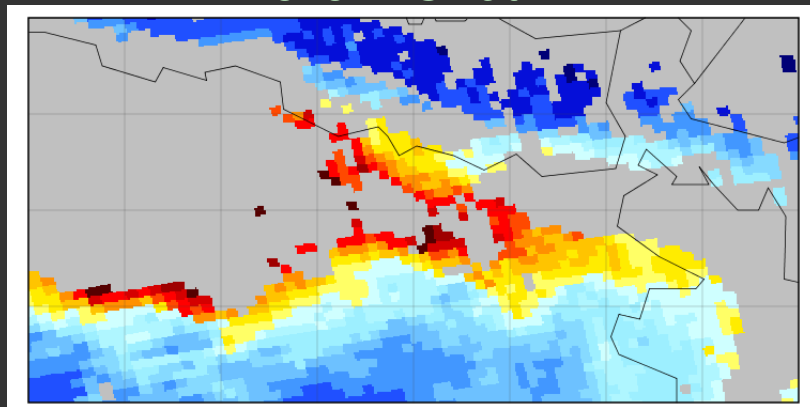

Level 3 Grid AOT Mean

Level 3 Grid AOT Standard Deviation

Level 2 Swath

Level 3 Grid AOT Input Pixel Count
